JustisOne

Account administrators can now manage their organisation's settings, add new users, manage their IP recognition, request training, email electronic resources to their users and much more with our new admin tools.

Access our new admin tools

As an administrator, when you sign in to JustisOne you will see an Admin button in the left hand menu. If your organisation is IP recognised, you will need to override the IP and sign in by clicking "Sign in as yourself" in the top right hand corner of the screen. Click on the admin button to open our Account Administration page, shown below. Use the left-hand menu and page tabs to navigate between options.

Personal users: Here you can view active users, deactivated users and add new users. You can also send out password reset links to individuals – helping them to gain access to their account faster when they've forgotten their log-in details.

- A Admin menu
- C Activate user
- B Reset password / deactivate user
- D Add new user

IP recognition: for those accounts whose users sign in via IP, you can manage and submit new IP recognition requests here. These requests are automatically sent to our Helpdesk, who will notify you as soon as the change has been effected.

Training and resources: Here you can send users our most up-to-date electronic resources, and request training sessions. All training is free to Justis subscribers.

- A** Add/submit IP recognition requests
- B** Request online training
- C** Send training material to users

Within the JustisOne application you can also update your organisation's SourceLink and jurisdiction settings, by visiting the settings menu.

SourceLink allows you to customised JustisOne so that links to Citations and Sources reflect the services that your users have available to them.

Alongside the full-text content, JustisOne provides an index of law reports, transcripts and official legislation on over 120 services. Access detailed relationships and citation metadata for each case and seamlessly link to the relevant documents on other services using SourceLink. For some subscription services, such as Westlaw, you will need to send us a sponsor code to enable the seamless linking in to your account. To get your sponsor code, please speak to your Westlaw representative.

The **jurisdiction** settings are customisable from all accounts, however as the administrator you are able to set them for all users as standard by clicking 'Save Organisation Settings'. Without clicking that button, your changes will only be valid for your account, for that session alone. If necessary, users can override the settings on their own accounts, any changes to the settings will be valid for that session.

Visit www.justis.com/resources to view online training videos and download the most recent training material for JustisOne, Justis and JustCite.

For more information on using our new tools, or for an admin training session, please contact training@justis.com
